- a – Plus Alloy Charge
- rsf – Removable Segment Fee
- w – Fee per Wing
- drc – Denture Repair Charge
- b – Plus Bands

## **Purpose of this Guide**

This suggested fee guide has been provided to members of the Association of Dental Technologists of Ontario for informational purposes only and to assist members in establishing their own fees. Members are not required to adhere to the suggested fees stated herein and are expected to independently determine their own fees for the services they provide.

# Professional Relationship

## General:

The selection of a Registered Dental Technologist (RDT) and laboratory is one of the most important decisions that a dentist makes in providing restorative or rehabilitative services to his/her patients. The success of his endeavors depends largely on the skill, knowledge and judgment of the Dental Technologist. This document describes the professional services offered by a Technologist and the fees recommended for the provision of those services. These fees are reflective of providing services in a consistent, responsible and ethical manner, which follow all technical and professional requirements without compromise. It is expected that the RDT will advise and consult with the Dentist when necessary, having examined the dental records and materials that are provided. The RDT must be fully aware of and conversant with all related protocol relevant to a particular procedure or service. This includes maintaining all requirements set forth by the College of Dental Technologists of Ontario (CDTO).

## Conduct:

The CDTO is accountable to the Ontario Ministry of Health, and is responsible for regulations of RDTs under the Regulated Health Professions Act.

Only those registered by the CDTO may legally practice Dental Technology in Ontario.

## Supervision and Responsibility

The RHPA states in section 32. (1) No person shall design, construct, repair or alter a dental prosthetic, restorative or orthodontic device unless,

- a. the technical aspects of the design, construction, repair or alteration are supervised by a member of the College of Dental Technologists of Ontario or the Royal College of Dental Surgeons of Ontario; or
- b. the person is a member of a College mentions in clause (a).

The RDT must carefully assess all procedures and efficiencies to make sure that the integrity of the restoration is not at risk. Dental prosthetics or tasks with implied warranties or performance expectations are dependent upon such assessments.

As per CDTO regulations, the Dental Technologist is fully responsible for the transportation of the patient's dental records to and from the Dentist's office.

## Calculation of Fees

The method for calculating fees is based on the establishment of a Gross Billing Rate, or Minute Rate. This number is a dollar value assigned to one minute of labour. All procedures have been timed into minutes and then multiplied by the minute rate.

Included in the minute rate are:

1. Overhead costs such as rent, taxes, maintenance, insurance and utilities
2. Labour
3. Furniture, equipment and maintenance costs
4. Supplies, sundries and minor material costs
5. CDTO quality assurance procedures

Services with a higher degree of risk or responsibility have percentages added to compensate for such risks.

Fees for appliances listed include pick-up and delivery, all model work and preparatory work etc.

Prosthetics requiring a higher number of pick-up and delivery services have associated costs reflected in the price.

Alloy, denture teeth, implant/attachment components or other significant items are NOT included. These costs should be added to the suggested fee.

Adjustment of fees is suggested if any of the procedures are modified, enhanced, or eliminated. It is the Technologist's responsibility to ensure that the dentist is made fully aware of the rationale behind any changes.

Implementation of this Suggested Fee Guide ensures that adequate resources have been provided to the Technologist to provide professional services.

## Goods and Services Tax (GST)

As all goods manufactured by an RDT are considered taxable, whether zero-rated or not, all dental laboratories should be registered for GST and file returns with Canada Revenue Agency.

The majority of dental appliances are considered to be zero-rated under the Excise Tax Act (ETA) and therefore, most RDTs do not charge GST for their services. However, please be advised that not all appliances fabricated by RDTs are considered to be zero-rated.

Zero-rated supplies are taxable supplies that are listed in Schedule VI to the Excise Tax Act (ETA) and are subject to the GST/HST at the rate of zero percent on the consideration for the supply. Since zero-rated supplies are taxable supplies, a registrant is entitled to claim an input tax credit (ITC) for the GST/HST paid or payable on any property or service to the extent that it is consumed, used or supplied in the course of providing zero-rated supplies. In order for goods or services to qualify for zero-rating, they must satisfy the requirements of Schedule VI to the ETA.

Medical and assistive devices (which include dental appliances), is located in Part II of Schedule VI to the ETA. Only devices contained within the listing within Part II are zero-rated for GST/HST purposes.

Section 11 of Part II of Schedule VI unconditionally zero-rates the supply of 'artificial teeth.'

Artificial teeth have been defined by the CRA as teeth that are fabricated for use as substitutes for natural teeth. Although they can be made of various materials, they are usually made of porcelain or resin. The artificial teeth must be anatomical in nature, must duplicate the forms of natural teeth, and must be fabricated for the use as a substitute for natural teeth.

The term 'artificial teeth' includes crowns, bridges and dentures. Crowns that are fabricated to replace 50% or more of existing teeth are considered to qualify for zero-rating. Some of these crowns are referred to by dental laboratories and dentists as partial crowns or veneers. In addition, crowns are often referred to as caps. Other goods that are fabricated to replace natural teeth are referred to as onlays. As long as such onlays meet the 50% criterion mentioned above, they are also considered to be artificial teeth. The term implants is also used for certain goods that are fabricated to replace natural teeth. Such implants are also viewed as artificial teeth.

Inlays are not considered to be artificial teeth and therefore, are subject to GST at the rate of 6% or 14% HST where applicable. Denture liners and reliners are viewed as accessories that are specially designed for dentures and are unconditionally zero-rated under section 32 of Part II of Schedule VI to the ETA as parts, accessories or attachments that are specially designed for a property described in this Part.

There is no zero-rating provision found within Schedule VI to the ETA that applies to bleaching trays prepared from an impression to be used for teeth whitening, which would be considered as being for cosmetic purposes, nor to mouth guards used to protect teeth from accidental breakage or to prevent teeth grinding. Any supply of those items would be taxable at a rate of 6% GST or 14% HST where applicable.

For further information, please contact your accountant or the GST/HST department of Canada Revenue Agency at 1-800-959-8287.
